This program is a powerful development tool to create dynamic and interactive Windows-based autorun applications or Web applications. This program has two parts: Editor and WBuilder. The Editor can generate executable code and WBuilder can assemble it into autorun application. 1) Editor part. One can use macros and functions provided in 1st file. 2) WBuilder part. One can use collection of templates provided in 2nd file. User must read code to understand how to create autorun application. After the code is finished, user can test the autorun application without executable code. There is no need to build into executable code. Once the code is compiled, you can see the autorun application running. There are two ways to create dynamic and interactive autorun application. One can use WBuilder part to create autorun application. This way is useful when you want to create autorun applications. One can use macro and 1st file to create autorun application. This way is useful when you want to create static autorun applications. There is no need to use any helper or dynamic function to run application. There is a simple application that have a form to submit customer order. One can use product list and form to submit customer order. There is a button named "submit order" to submit customer order. When user clicks on submit order, it will be redirected to the application run URL. User must enter the URL to run the application. There is an application that play the game with a lot of animals. One can see the game progress at a given time in the text area. When user clicks the link, it will be redirected to the application run URL. User must enter the URL to run the application. There is a lot of animals on the screen. One can move each animal to save time. There is an application that shows the times in past, present, and future. One can click on the link to move to the present time. One can use text box to write a message at the present time. This program is similar to a calculator.

One can enter any mathematical equation. One can click on "= ", and then it will show the result of the mathematical equation in the text area. One can add, subtract, multiply, and divide the mathematical equation. This program is a product list application. One can enter new product or remove existing product. It is similar to the product list application. One can 82157476af
